TO BE COMPLETED BY FUNERAL DIRECTOR

TO BE COMPLETED BY PHYSICIAN: MEDICAL CERTIFICATION

BALTIMORE, MARYLAND 21215-0020

DIVISION OF VITAL RECORDS, P.O. BOX 68760,

TO THE HOSPITAL OR ATTENDING PHYSICIAN: The law requires that the death certificate be executed within 24 hours after death. Page 6 may be retained by the hospital or attending physician. TO THE FUNERAL DIRECTOR: After this certificate has been signed by the attending physician and completely filled in by the funeral director, page 5 should be detached for use as the burial-transit permit. Pages 1, 2, 3 should be filed within 72 hours after death with the State Dept. of Health and Mental Hygiene prior to burial, cremation, or removal.

IMPORTANT: If item 28 is marked, or item 23 shows any injury, or other traumatic event, the medical examiner must be notified at once.

The first part of the paper is devoted to a discussion of the
 various methods which have been proposed for the determination of
 the rate of reaction between a solid and a liquid. It is shown that
 the most reliable method is that of measuring the change in weight
 of the solid as the reaction proceeds. This method is applicable to
 all cases in which the solid is insoluble in the liquid. It is
 also applicable to cases in which the solid is soluble in the liquid,
 provided that the solid is in the form of a powder or of small
 pieces. The method of measuring the change in weight of the solid
 is described in detail, and it is shown that it can be applied to
 the determination of the rate of reaction between a solid and a
 liquid in a wide range of cases.

The second part of the paper is devoted to a discussion of the
 various factors which influence the rate of reaction between a solid
 and a liquid. It is shown that the rate of reaction is influenced
 by the nature of the solid, the nature of the liquid, the temperature
 of the reaction, and the surface area of the solid.

The third part of the paper is devoted to a discussion of the
 various factors which influence the rate of reaction between a solid
 and a liquid. It is shown that the rate of reaction is influenced
 by the nature of the solid, the nature of the liquid, the temperature
 of the reaction, and the surface area of the solid.

The fourth part of the paper is devoted to a discussion of the
 various factors which influence the rate of reaction between a solid
 and a liquid. It is shown that the rate of reaction is influenced
 by the nature of the solid, the nature of the liquid, the temperature
 of the reaction, and the surface area of the solid.
